EBECO

EB-Connect WiFi

WiFi module

Usage

- WiFi control of Ebeco's 500 series
- Enables control via app and open API

- Extended calendar function
- Energy and cost monitoring
- Google Home Assistant Support

EB-Connect WiFi plays an important role in our WiFi READY concept. With the help of the WiFi module, which is inserted into the thermostat, EB-Therm 500 and the electric convector Wallflex 500 can be developed to a system that can be controlled via the Ebeco Connect app or the open API. In the app, energy use is presented in a clear way while the calendar and alarms functions are made available via push notifications or emails. All functions of the thermostat can be accessed from the app.

Specifications

Contains SVHC substances according to REACH	No
