

## Frost protection for base slab

This durable heating cable for the base slab protects against expensive and time-consuming frost heave during the construction phase.

It is easily installed in the sand layer on the bottom of the trench and is engaged when frost threatens. The low output per square metre also gives low operating costs.

### TECHNICAL INFORMATION:

---

Cable type	series-resistant
Cold cable length	2 m
Connection voltage	400/230 V
Lowest installation temp.	-10°C
Smallest bend radius	50 mm
Output	16 W/m
Connection device	CEE/Plug
Approval	CE

### ARTICLETABLE:

---

Item number	Length	Output	Voltage	Connection device
8960488	235 m	4000 W	400 V	CEE
8960489	135 m	2200 W	230 V	Plug

### GARANTI:

---

See our [general delivery terms](#)

### ACCESSORY:

---

## Ebeco Cable Guard

Cable Guard is used during the entire installation process with all types of heating cables and for any repairs. Cable Guard warns if the cable is broken or there is a short-circuit to earth.
