

EB-Connect WiFi

EB-Connect WiFi plays an important role in our [WiFi READY](#) concept. Using the accessory, underfloor heating can easily be controlled with the Ebeco Connect app or via open API.

Simple and clear in the app

Supplementing the [EB-Therm 500](#) thermostat with the EB-Connect Wi-fi module opens new possibilities for efficient control of underfloor heating systems. With the help of Ebeco Connect, you are given access to all the thermostat features and can also easily create an overview of all installed underfloor heating, no matter where you are. If you enter information on the cost of your energy, you can also get an overview of heating costs.

Download the app for free here:

Extra features – advantage app

Of course, the app offers more exciting features. [EB-Therm 500](#) underfloor heating thermostat has a weekly calendar in which you can set on and off times for the underfloor heating during the week. The Ebeco Connect app instead offers a yearly calendar that allows you to add a master schedule for the whole year so that all thermostats in the property are controlled in the same way.

Optimum comfort in the cottage

Perhaps you are on your way to your summer cottage or mountain cabin? With Ebeco Connect, you can start the underfloor heating so that the floors are warm and comfy when you arrive. You only have to make sure that the thermostats are connected to the cabin's wifi.

The app assists you

If something unexpected happens with the underfloor heating system, you can be alerted by either email or push notifications. This is easily set up when you install the app.

Easy to install

EB-Connect WiFi is easy to install in the thermostat. If you already have installed an [EB-Therm 500](#), you can purchase the accessory at your dealer and connect it yourself. We have ensured that you cannot access live parts.

Here's how:

- install the EB-Connect WiFi module into the EB-Therm 500 thermostat
- select network and enter the password for your network in the thermostat
- download Ebeco Connect from App Store or Google Play
- follow the instructions in the app

Secure connection

We have focused heavily on security as well as your settings and your personal data are protected from intrusion. You must approve our terms of service when you download and use the app. Would you like more information on how we process personal data? [Click here.](#)

Smart homes and underfloor heating

Do you have a ready-made solution for your smart home or do you want to create your own system? We're prepared for that too. Our new thermostat is designed to take its place in the smart home. Through our open REST API, you can integrate the underfloor heating into your network and control it together with the rest of your home. Only you set the boundaries!

Read more under the "Open API" tab below.
